# AGRO REPORTS

**Seedone**, to do our duty as a customer-driven company, supply what you deserve with high-quality products, present fast and flawless service, bring satisfaction to our customers, and give delight to our employees. Understand the needs and challenges of our customers. Identify and capitalize on existing synergies. One of the ways this company is to inform the clients about the current market situation and the forecasts through which they can continue their business with financial speculations. The report provided a schedule every month, helping us in this crucial matter.

### **Market Overview:**

During the previous week, international lentil markets continued to strengthen, with green lentils maintaining strong premiums over red in both grower and inter-dealer markets.

Off farm disappearance of all classes of lentils continues to be robust in both Canada and the United States, with 69% of what was available on Canadian farmers being transported to the bulk processing system as of April 9.

The rate of movement and reasonably strong values suggest that the total seeded area in Canada should be up this year, but a change away from red to green lentils may negate that argument.

CGC reports 10,600 MT of bulk lentils were loaded for export through reporting terminals and primary elevators between April 3 to April 9. Since the start of the crop year farmers have delivered 71% of all lentils on their farms to companies reporting to the CGC, compared to 50% at the same time last year.

Europe is also expecting poor crop yields as a result of the dry weather, which is not a new concern for the region. This could have an impact on Canadian prices in the future if demand from Europe increases.

Due to strong returns relative to other crops, the area sown in Canada is predicted to be somewhat lower in 2023-2024, at 1.73 Mha. A higher yield is projected, with production increasing to 2.65 Mt. Supply is forecast to rise to 2.83 million tons, with lower carry-in stocks. Exports are expected to remain constant at 2.3 Mt. Carry out stockpiles are projected to rise, although they remain historically low. The average price is expected to fall beginning in 2022 23, assuming an average grade distribution and discounts for lower grades.

## Market Outlook

This report, prepared by ACEAGRO CORP, offers a comprehensive analysis of the Canadian green laird lentils market for May 2023. Our goal is to provide our clients with the essential information needed to make well-informed decisions in the context of the agricultural commodities market. We present an overview of the bullish market, taking into consideration factors influencing price movements such as weather patterns and inflation expectations. Additionally, we discuss how to effectively utilize capital management principles when procuring and selling Canadian green laird lentils.

The Canadian green laird lentils market has been experiencing a positive trend, with prices projected to reach CAD 1500 for grower bids (delivered processing plant) by 2024. This can be attributed to several factors, including increasing global demand, government support and policies, and inflation expectations. As we start May 2023, it is crucial to remain informed about market dynamics and weather patterns to make well-informed decisions within the agricultural commodities market.

### Strategies for May 2023

1. **Market Analysis:** Conduct a thorough analysis of the Canadian green laid lentil market, focusing on factors affecting supply, demand, and consumption patterns. Regularly read reputable sources such as Stat Pub and Agriculture and Agri-Food Canada to stay updated on market trends and industry news.
2. **Price Predictions:** Based on our analysis, we anticipate that the price of Canadian green laid lentils in May 2023 will continue to rise, reflecting the bullish market. This presents an opportunity for clients to capitalize on this trend by entering the market at the right time and price.
3. **Capital Management:** Implement a risk management strategy to protect your investment in the agricultural commodities market. This includes:
  - a. **Diversification:** Spread your capital across various agricultural commodities, reducing the impact of potential losses in any single market.
  - b. **Position sizing:** Allocate a specific portion of your capital to each investment, ensuring that you do not overexpose yourself to a single commodity.
  - c. **Dollar-cost averaging:** Consider dividing your capital into several parts and investing in the Canadian green laid lentil market at different market lows, which can help reduce the impact of market volatility on your investment.
4. **Procurement Timing:** The optimal time to buy Canadian green laid lentils will vary depending on market conditions and your individual procurement strategy. Monitor price fluctuations and market indicators to identify the most favorable purchasing opportunities, particularly during market lows.
5. **Building Relationships:** Establish relationships with Canadian lentils suppliers and freight providers to facilitate seamless and cost-effective transactions. Engage in ongoing communication to ensure you are well-informed about product quality, shipping schedules, and other pertinent information.
6. **Selling Strategies and Compliance:** Understand the consumer trends and demands in your target markets to devise an effective selling strategy for Canadian green laid lentils. Monitor the market dynamics to identify the best time to sell and maximize profits. Familiarize yourself with the customs regulations and government rules in your target market countries to ensure compliance with their import requirements and avoid potential issues.
